

PMI® FAST Lock Patient Restraint System Patient Care | Rigid Litters and Accessories

The PMI® Fast Lock Patient Restraint System is an upgrade of the PMI® FAST. Four locking carabiners make for streamlined patient securing in a fraction of the time compared to traditional methods.

Color-coded shoulder and leg straps ensure a firm, stable hold, while stirrups made using 12.5mm PMI rope position the patient comfortably toward the head. When a seat harness connection is required, the system provides a quick, reliable attachment. In the field, each strap can be rapidly connected using the locking carabiners to accommodate specific patient needs or injuries. With metal connectors, you can trust in a secure connection every time. Experience the unmatched efficiency and performance of the PMI® FAST Lock.

Patient seat harness and carabiners shown not included.

Key Features

- Designed to be used easily with both one and two-piece litters
 - Upgrade of the FAST Patient Restraint System
 - Shoulder straps hold the patient in place, even in a head-down position
 - Attaches to almost any rigid frame litter with girth hitches
 - Quick-securing carabiners allow streamlined patient restraint in critical moments
 - Color-coded shoulder and leg straps ensure fast and correct placement every time
 - Comfortable stirrups made with 12.5mm PMI rope support the patient's head securely
 - ANSI-compliant metal connectors provide reliable, high-strength safety
 - Adjustable straps adapt easily to various patient needs and injuries
