

Flexible Ladder Y-Spreader

Used when you need to attach a flexible ladder to a single attachment point. A LADDER SPREADER is used to link the ends of a COMPACT flexible sided ladder to a suitable anchorage. Its Y shaped construction achieves the correct loading angle on the COMPACT ladder ends where the ladder is rigged from a single anchor point. *Note: LADDER SPREADERS are not PPE. They must not be used as an alternative to an EN795 wire anchor strop.*
