

Beal - Shaolin Harness

Beal |

Stylish, light-weight work positioning and rescue harness is laser cut and ergonomically curved for maximum comfort, with optimal pressure distribution on the hips and thighs. This unique harness fits almost any body type comfortably. With the largest size weighing in at under 28 ounces, it is especially suited for austere environments including backcountry rescue, via ferrata, and challenge course operations.

Comfort

This harness benefits from new technology in the PRO range: WEB CORE technology provides exceptional levels of comfort thanks to optimal pressure distribution on hips and thighs. WEB CORE is a wide, thin and lightweight piece of webbing laser cut to the shape of the harness. This results in a more compact, lightweight and above all more comfortable harness.

Ergonomic

Its ergonomic construction allows a large range of movement. The low position of the ventral attachment point yields maximum progression when ascending ropes, while its large diameter provides the space for multiple connection to be made i.e. ascenders, connectors, descender and lanyards. Two ways of attaching equipment: A large ring provides the space for multiple carabiners and lanyards to be connected and accessed easily during a rescue. Two textile attachment points for connecting lanyards metallic devices on both sides of the ring. 2 lateral attachment points EN 358. 1 dorsal attachment point for winching. A handle can be fitted at the back for rescue use. 5 gear organisers, 4 gear loops and 6 fabric loops to connect parts of the WORK STATION range. Replaceable rear elastics on leg loops.

Traceability

Traceability via an identification area with QR code which allows a personal identifier to be generated (your name and unique ID). Compatible with the [AIR TOP chest harness](#) to create a full body harness EN 361.

Key Features

- Exclusive BEAL WEB CORE Technology
- Textile and Aluminum front connection points accommodate numerous attachments
- Side positioning attachment points
- Drop Seat Rear Risers
- Designed to fit with AIR TOP chest harness
- Optimized for wide range of motion
- Omni-directional front (ventral) connecting ring
- Five flexible gear loops
- Clear ID window for personalization
- Low ventral attachment
- Full strength rear waist attachment point for positioning or restraint
- Flat webbing tool attachment points around the waistbelt
- Three sizes for precision fit
