

BEAL Dragon Harness

The DRAGON Safety Harness is designed for rescue use. This harness has sliding thigh straps for better positioning and comfort. Each of the thigh straps is color-coded, yellow on the left and black on the right to make it easy to put on. It has two EN 358 textile side tie in points and a yellow rear tie in point on the belt for emergency evacuations. All these tie in points are identified in yellow. Combined with the [DRAGON TOP](#), this harness becomes perfectly suited for fall protection and work positioning. Its four equipment loops, two tool loops and six textile loops make it possible to attach a range of work tools. To cater for all situations, it is compatible with the components of the WORK STATION range.
