

## BEAL Aqualine 9.5MM

### Beal |

## An easy to handle rope for canyoneering.

The Aqualine 9.5mm is a rope ideal for technical canyons. Indeed, the Aqualine 9.5mm is a thin rope totally suited to advanced canyoning. However, the Aqualine 9.5mm requires sustained attention during descent, as well as appropriate technique. With its bright color, the Aqualine 9.5mm stands out easily and facilitates the descent technique with the rope at water level. The diameter of Aqualine 9.5mm allows it to remain flexible after retraction to facilitate knots and kitting. Also, the Aqualine 9.5mm has a very low elongation (only 2.4%) due to the presence of a static strand of Vectran inside. When retracting, the Aqualine 9.5mm tends to warp slightly, because the Vectran does not retract, but this effect has no consequences for the use of the Aqualine 9.5mm. Furthermore, under the effect of repeated soaking, the length of the Aqualine 9.5mm may be reduced.

---

### Key Features

- Light
  - Low elongation
  - Remains supple
-

## Additional Information

**Shipping weight** | N/A

**Color** | Yellow

**Length** | 100m (328 ft), 200 m (656 ft)

**Diameter** | 9.5mm

**Material** | Polyamide, Vectran

**Impact Force** | 5.2 kN

**Breaking Load** | 22.8 kN

**Elongation** | 1.5%- Static

**Knotted Strength** | 12 kN / 3 min

## Product Code

BOBCSC095.100 | 100m (328 ft)

BOBCSC095.200 | 200 m (656 ft)
