

A Y-shaped safety lanyard for adventure and acrobatic routes. The DYNAPARK Y-Safety Lanyard has two strands of rope that are each 80cm long and is made of dynamic rope with sewn-on endings. It is therefore much safer than static lanyards with a strength of 1500daN. For added safety, the carabiners can be attached to the lanyard with the PINCH attachment. To facilitate inspections, each lanyard has a unique identification number and can be fitted with an RFID chip.
