

Belay Device for single ropes

The AIR FORCE 1 belay device can be used with single ropes of a diameter between 8,5 and 10,5mm. The V-groove runs smoothly enough to pay out slack easily, but also offers extra friction to improve rope braking while belaying and optimum energy absorption should the climber fall.

Long lasting and individual tracking number

The wide, smooth groove also avoids parasitic friction on edges and keeps rope wear to a minimum. For added security, each belay device has an individual number that guarantees its traceability.

Key Features

- | | | |
|---|---|---|
| • V-groove for better traction | • Braking force adapts to the rope diameter | • Made for small diameter ropes, 8.5mm - 10.5mm |
| • Straight edge design reduces abrasion to rope | • Great for climbers of all experience levels | |
