

SKYLOTEC Conrest Rescue Kit Patient Care | Patient Packaging

The Conrest Rescue Kit makes it possible to rescue accident victims in places that cannot be reached with standard stretchers. Its short design and construction allow the spine, head, pelvis, and arms to be secured with strong and stabilizing webbing. Thanks to numerous handles and carrying straps on all sides enable the stretcher to be maneuvered safely and quickly in all directions. The Conrest has a stable and solid skid plate that ensures the safe movement of the patient over edges or obstacles. The foot cover/leg pouch which when required can also be used to secure the feet, also comes as part of the standard equipment. In addition, special suspensions can be attached to the carrying loops, which can be connected to a mobile sling system to rescue casualties from a manhole, out of a wind turbine, or other confined spaces. A color system ensures quick handling and all anchorage points are marked in orange. [User Manual](#) [Data Sheet](#) [Declaration of Conformity](#)

Key Features

- Color-coded for fast security of patient
 - One size fits all up to 330 Pounds (150 kg)
 - One bag for all contents
 - Stable skid plate
-
