

## PMI® Hasty X Evacuation Seat Pro | Pro Personal Gear

The PMI® Hasty X Evacuation Seat™ is intended for use as an evacuation and extrication device. It is a full two pounds lighter than the previous version of the PMI® Hasty Harness. This evacuation seat is designed for use as a quick, efficient, and easy-to-use device for evacuation when other harnesses are not available and a rapid evacuation time is essential. It is also used as an extrication seat for attaching to a subject when a separate extrication system is needed that can easily go over bulky clothing or equipment. The strategic cutout of material for the lower area has dual straps versus a single strap between the legs that provides a comfortable and secure fit for most body sizes. Make sure to have the PMI® Hasty X Evacuation Seat™ for any hasty evacuation or extrication rescue situation!

---
