

PMI Versa Lanyards Pro | Pro Personal Gear

The PMI Dynamic Versa Lanyard line features a unique feature that the connector ends are unsewn, allowing the user to choose their preferred life safety knot at the end(s). Each leg is close to 60 inches long, with enough length for even the tallest user and a large knot/loop. The VersaTether is a single leg, the VersaTwo Lanyard has two legs with the sewn eye being twisted to allow for a better location of the lanyard position on the harness. The VersaLink Lanyard also has two legs and a short loop for making a close connection. Testing shows that tied knots can help provide increased safety by helping to reduce impact forces in the event of a fall.

Key Features

- Made from 9mm PMI Dynamic™ rope
- Available in 3 styles
- Light weight
- National Cave Rescue Commission (NCRC) approved size

Additional Information

Shipping weight | N/A

Type | VersaLink, VersaTether, VersaTwo
