

11 mm PMI® Swaged Termination

High strength, no-knot terminations for PMI® Classic and Patriot ropes. PMI swaged rope terminations are always stronger than any knotted termination. Swaged terminations are formed using aluminum sleeves and a stainless steel thimble. Swages are applied to the rope using a precision steel die and the resulting termination is nearly as strong as the rope itself. (Ropes may not be swaged after leaving the factory.)

Key Features

- High strength termination
- Stronger than knots
- Available for 11 mm or 12.5 mm PMI® Classic Ropes

Additional Information

Shipping weight | N/A
