

Climbing Technology Sparrow 200R

Developed specifically for rescue loads, the Sparrow 200R excels with heavy workloads. It may be used for descending, ascending, and lowering operations with 11mm rope. Internal brake spur is designed for smooth, effective control with a range of loads, light to heavy. Brake lever is designed to return to stop when released, and the EBS Brake lever is designed to return to stop when released. The EBS Safety System reduces speed if the lever is accidentally fully opened.

Key Features

- Able to load the device mid-line
- Multifunction control lever
- EBS Safety System
- Built-in braking spur for extra friction

Additional Information

Shipping weight | N/A
